Our Mission

For Loxone to be able to take care of thousands of different tasks and processes through intuitive automation. Whether in your own home, a commercial environment or for a custom application. Creating automation with Loxone saves time and gives peace of mind knowing that everything is under control.

Our mission is to bring this to the world.

Creating a wow factor with lighting

Automated Lighting

Motion Sensor as Presence Sensor

When it comes to building automation, the detection of presence is one of the most important inputs. Knowing if someone is in the building affects the lighting, cooling, security, ventilation, energy management and more.

The Presence Sensor from Loxone reliably detecting motion and presence, sound, and measuring brightness levels - making it an invaluable component for building automation.

Automated Blinds

Automated Shading

Fully automatic shading which intelligently regulates itself depending on the position of the sun, solar irradiation and the temperature. Automated shading is a massive help when trying to achieve a perfect room climate in your workspace.

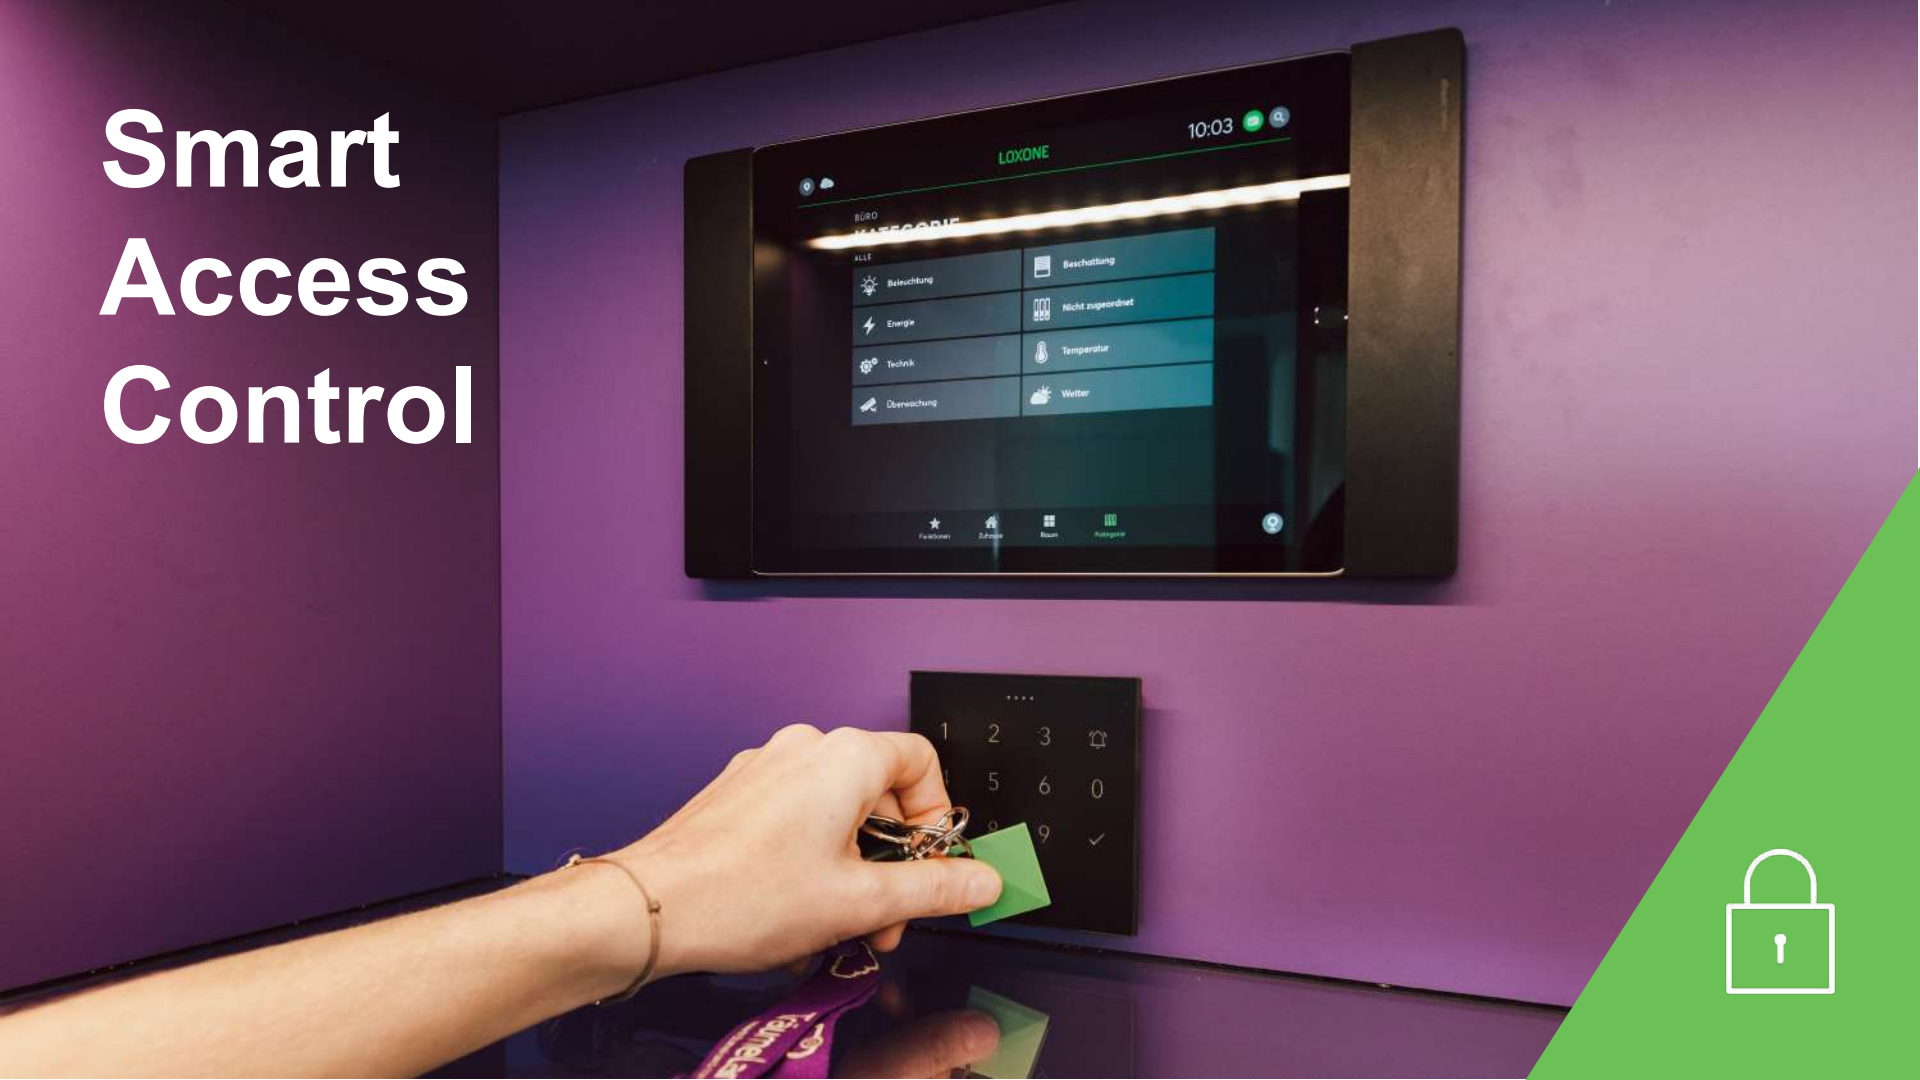
Energy Management

Energy Management

No one wants to work somewhere that is either too hot or too cold. With Loxone they won't have to, as you can ensure that every room is always at the set temperature. Loxone can take control of the cooling sources to ensure you always have the perfect room climate.

If Loxone is being used to control the shading, then it can lower the blinds in a bid to block out the sun and maintain a comfortable temperature inside. Likewise, if letting in the morning sun would be a more cost-effective way to heat the offices in the morning, then Loxone can make that decision for you. Overall, there are significant savings to be made by automating the climate of your office or business premises; so you'll have a reduced energy bill to go along with your happy employees.

Smart Access Control



Access control

NFC Code Touch

Access control with Loxone is simple and personalised. Your employees and contractors simply present their NFC Key Fob to the NFC Code Touch and they'll be granted the relevant access if their permissions allow.

The NFC Key Fob provides a cost-effective alternative to keys, which can be placed directly on a key ring. If someone happens to lose their fob, or someone's access needs to be rescinded, an appropriate user can simply delete that user's fob (via the app) and, if needed, pair a new one.
